Skills

Languages: Java, Kotlin, Go, Javascript, C/C++, Java, Typescript, Python, SQL

Technologies, Tools & Frameworks: GraphQL, Rest APIs, Web sockets, AWS, EC2, EKS, Far-gate, IAM, S3, Cloud front, SQS, SNS, Redis, Kubernetes, Docker, Grafana, Prometheus, RabbitMQ, Kafka, Nest, Echo, React, Svelte

Work Experience

Amazon, Bangalore

January 2026 to Present

Software Development Engineer II

- Built the coupons backend systems helping reduce the latency of the legacy API by 32%
- Built Integration Tests and helped 10% percent pipelines full cd

Binary Digital Labs (remote)

July 2025 to January 2026

Software Engineer II

- Built the monitoring infrastructure using OTEL stack for the Backend which helped bring down TAT for incidents from days to hours.
- Improved the websockets and optimised few queries by around 85% using dataloaders, indexes, materialised views and cache.
- Improved latencies by 3x by using best event driven practices.
- Designed and built the entire onramp and offramp rails and backend.

FUTY, Mumbai (remote)

June 2024 to July 2025

Senior Software Engineer (Acting CTO)

- Assembled, mentored and led a 10+ member development team driving the the complete tech infrastructure at FUTY.
- Introduced agile, check pointing system, high ownership values and quick feedback cycles which boosted development efficiency by 40% and reducing overall development costs by 80%.
- Handled 0 to 6000+ growth of user base 24*7 with 99% up time.
- Implemented database query optimizations (using views), achieving a 90% reduction in execution time across complex multi-join operations.
- Delivered 50+ animation rich pixel perfect UI experiences using react, motion, typescript, shadcn, react-query.

Software Engineer (Founding Engineer)

January 2024 to June 2024

- Led the technical execution for the MVP launch, on boarding 2,000 initial users.
- Engineered and maintained the backend for a high-traffic Web 2 React Native application supporting over 8,000 users.

Cashfree Payments, Bangalore

June 2022 to January 2024

Software Engineer

- New UPI collect auto-fetch feature resulting in a 60% reduction in time taken from order creation to payment and a 500% increase in clicks on the collect payment mode.
- Implemented the Customer Suite, providing merchants with enhanced Analytics, Lead Generation, and Session Management capabilities, improving their business insights and engagement for over 3000+ merchants.
- Streamlined the developer experience by designing and implementing a new web hook flow for the DEV playground link, saving 2+ setup hours for developers.
- Developed new Java and Python SDK, achieving over 2000+ downloads and enabling easier integration for external developers.

Software Engineer Intern

January 2022 to June 2022

- Learned agile methodology, SDLC, microservices and clean architecture, unique-id chaining across microservices, logging, monitoring and debugging, Go and Java in production in real-time transaction systems

American Express, Hyderabad (remote)

May 2021 to June 2021

Software Engineer Intern

- Delivered a final presentation to senior leadership on optimal cloud service providers for Indian operations; presentation led to the selection of AWS, reducing infrastructure costs by 5%.

Education

National Institute Of Technology, Warangal (NITW)

B.Tech in Electrical and Electronics Engineering

August 2018 to May 2022

CGPA - 8.24/10

Narayana Junior College, Hyderabad

Senior Secondary College

August 2015 to May 2017

Percent: 98.4

Project Work

- **Personal Portfolio:** Developed using motion, tailwind and Next to showcase my personal portfolio along with hands-on experience of SSR.
- **Weather App:** Used Open weather API along with react native.
- **Kan-ban Board:** Created using React, Motion.
